

GREC X

Specs:

1080P @60fps

Internal microphone

Supports up to 128gb microSD cards (class 10 preferred)

Internal rechargeable battery (via micro usb)

Nylon12 Housing

*GREC-X is compatible with pvs14 eyepieces, it will work with any device with that eyepiece such as: DTNMG, DTNVS, RNVG, Sentinel, MOD3 Bravo, BNVD-1431, Katana and so on.

Description:

GreC X was designed using quality components and intuitive design to allow the user to film it's night vision device having minimal FOV interference, the lens is placed behind the eyepiece at a distance impossible to focus on for your eye . This causes your eye to look past the lens and focus on your eyepiece instead. It is more noticeable on single tubes, but hardly on dual tubes. You will be able to start and stop the recordings with 1 button as well as to turn the camera on and off.

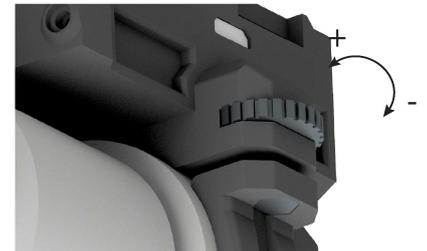

Mounting

To mount the camera on your device just unscrew the tightening clamp and slide it over the eyepiece ring until the physical notch hit the eyepiece, then tighten the knurled nut to fix the camera to the device.

Please be aware to use little force screwing on the camera so the mount will rotate in case of any hit.

To initially start the camera just press the "ON" button once, it will automatically turn on, a blue led will blink during the initial checkup then it will start recording automatically.

- **Turn on the camera:** Press the "ON" button once when the camera is turned off. after a quick startup the indicator will show a blinking led, that means the camera is recording the scene
- **Stop the recording:** Press the "ON" button once. Camera will enter in stanby mode and a steady led indicator will show up. It means that the camera has correctly saved the recording and it's ready to start a new one.
- **Start the recording:** Press the "ON" button once. The indicator will start blinking while recording
- **Turn off the camera:** Press the "ON" button for 3 seconds when the camera is turned on

To charge the camera plug the micro usb connector into the external port, a steady red led will show up, tha camera is fully charged when the indicator shuts off

Every footage will save when stopped and every 5 minutes. Please remember to stop the recording before turning off the camera to avoid loosing any shot. MicroSD and USB power charger are not included, class 10 high quality Sd card is highly recommended.
